VadaTech Announces Line of FMCs for Network Interface

Henderson, NV – July 10, 2014 – VadaTech, a manufacturer of embedded boards and complete application-ready platforms, now offers FMCs with high-speed interfaces up to 40GB speeds. This includes cages for dual QSPF+, SPF+, and RJ-45 as well as some quad cage versions.

The latest in the network interface series of FMCs is the FMC108. It features dual QSFP+ ports for 40GbE/SRIO, PCIe, and Aurora. The dual re-driver is on-board, allowing long copper cables to be used. The FMCs meet the VITA 57 specifications for FPGA Mezzanine Cards (FMCs). The front panel also has dual sets of LEDs for USER0, USER1, and PRESENT. VadaTech develops custom FMCs or FPGAs upon request.

VadaTech offers FMCs in three types: networking interface, A/D and D/A conversion, and RF modules. The company also provides the full Xilinx suite of FPGA carriers and several Altera-based designs.

About VadaTech

VadaTech provides innovative embedded computing solutions from board-level products, chassis-level platforms, to configurable application-ready systems. With a focus on MicroTCA and AdvancedTCA solutions, the company offers unmatched product selection and expertise in the full xTCA ecosystem. With our unique combination of electrical, mechanical, software, and system-level expertise, VadaTech can provide customized commercial or rugged computing solutions to meet the most complex customer requirements. VadaTech also offers specialized product solutions for VPX/VME, CompactPCI, and other architectures. A member of PICMG and VITA, VadaTech is headquartered in Henderson, NV with offices in Europe and Asia Pacific.
